ERFAN SABOURI

19 Aug 1998

PROFESSIONAL SUMMARY

Results-driven Backend Developer with 7+ years of experience designing and developing scalable web applications serving millions of users. Proven track record in optimizing high-traffic systems, leading development teams, and implementing efficient solutions using PHP, Laravel, MySQL, and modern backend technologies. Successfully progressed from developer to team leader, managing cross-functional technical projects and mentoring development teams.

EXPERIENCE

Pol (www.poltalk.me) – Back-end Developer

2026

- Led backend development initiatives for PolTalk over a 6-month engagement, collaborating closely with product and engineering teams to improve platform scalability and reliability.
- Integrated the platform with Stripe, implementing secure payment processing, subscription management, and transaction workflows.
- Redesigned and optimized the consultant scheduling and booking system, improving availability management, reducing booking conflicts, and enhancing user experience.
- Improved backend performance and maintainability through code refactoring, database optimization, and workflow standardization.
- Due to war, engagement concluded following a company-wide workforce reduction affecting the entire development team

Melodify (www.melodify.app) – Back-end Team Lead

2022 – 2026

- Lead a backend development team following **Test-Driven Development** (TDD) practices, implementing standardized workflows and tracking methodologies that improved team productivity and project delivery timelines
- Architected and developed a streaming platform serving **12+ million** active users using **Laravel, Node.js, MySQL, Redis, and Galera clustering** for high availability
- Developed AI-powered features and domain-specific code solutions, leveraging machine learning capabilities to enhance platform functionality
- Architected and developed a streaming platform serving **12+ million** active users using Laravel, Node.js, MySQL, Redis, and Galera clustering for high availability
- Optimized database queries and built a statistical reporting system

- processing **100+ million daily records**, reducing query execution time by 60%.
- Integrated SQL, Redis, and intelligent caching strategies to achieve 99.9% system uptime and significantly reduce server load
- Designed and implemented real-time monitoring system using WebSockets to track load balancers and microservices across distributed architecture
- Successfully migrated legacy application from Laravel 5 to Laravel 12, refactoring entire codebase while maintaining zero downtime and 100% data integrity
- Developed reusable Laravel packages and modules adopted across multiple high-traffic projects within the organization
- Created comprehensive API documentation using Swagger annotations and facilitated cross-team technical communication
- **Promotion:** Advanced from Backend Developer to Team Leader within 4 months based on technical excellence and leadership potential

Thirdly, Birmingham UK (Remote) – Back-end Developer

2020 – 2022

- Develop and manage dashboards with project results generated internally for debugging and troubleshooting purposes and externally for the clients
- Perform deployment source control management, utilizing **GIT**
- Responsible for keeping up to date on latest industry software development innovations and leveraging these to improve the products that their team develops
- Performs **data validation, error checking**, troubleshooting, and performance tuning of existing application database environments.
- **Work with Test Engineers** and participate in testing of all database-related changes and application updates.
- Work with the business in the development of new technology such as using **local websocket and firebase** together.
- **Reviews** the work of others.
- Maintains corporate standards for deploying technology and works with senior management in **strategic planning**.
- Perform Agile testing – create and execute test scripts.
- Build and Deployment **Automation practices**, tools and administration.
- Application Lifecycle Management practices, tools and administration.
- Document all related work per company's methodology.
- Assist in scope definition, planning, estimation and tracking.
- Develop API services in an **Agile environment**.
- Create and execute **unit test** plans.
- Developing customized logger services using different databases such as **mysql, mongodb** and **firebase**.
- Secure all endpoints using **OAuth** service.
- Documenting all developed apis with **swagger**-based testing interfaces.

- Developed a fair **bidding system** via **firebase** which can handle thousands of transactions simultaneously.

Shiraz University Incubator – *Full-stack Developer*

2019

- Partner with peer technologists to share learnings and provide hands-on assistance
- Knowledge of modern web development frameworks and tools
- Developing a virtual assistant bot for both students and teachers to reach better performance for taking and passing courses.

Freelancer – *Full-stack Developer*

2016 – 2019

- Develop and manage dashboards with project results generated internally for debugging and troubleshooting purposes and externally for the clients
- Be an active partner for Product management in order to provide the best value for stakeholders and our customers
- Perform deployment source control management, utilizing GIT
- Provide assistance in training on key functions of the product
- Manage and add to the external developer portal containing swagger-based testing interfaces and “How-To” articles
- Develop API services in an Agile environment
- Document all related work per company's methodology
- Build and Deployment Automation practices, tools and administration

EDUCATION

Shiraz University – *Bachelor of Software Engineering*

2016– 2020 , Shiraz, Iran
